 This SpringerBrief deals  
 with the control and

optimization problem in  
 hybrid electric vehicles.  
 Given that there are two  
 (or more) energy sources  
 (i.e., battery and fuel) in  
 hybrid vehicles, it shows  
 the reader how to  
 implement an energy-  
 management strategy  
 that decides how much of  
 the vehicle's power is  
 provided by each source  
 instant by instant. Hybrid  
 Electric Vehicles:  
 •introduces methods for  
 modeling energy flow in  
 hybrid electric vehicles;  
 •presents a standard  
 mathematical formulation  
 of the optimal control

problem; •discusses  
 different optimization and  
 control strategies for  
 energy management,  
 integrating the most  
 recent research results;  
 and •carries out an  
 overall comparison of the  
 different control  
 strategies presented.  
 Chapter by chapter, a  
 case study is thoroughly  
 developed, providing  
 illustrative numerical  
 examples that show the  
 basic principles applied to  
 real-world situations. The  
 brief is intended as a  
 straightforward tool for  
 learning quickly about

state-of-the-art energy-management strategies. It is particularly well-suited to the needs of graduate students and engineers already familiar with the basics of hybrid vehicles but who wish to learn more about their control strategies.

To understand light and optics better, young Isaac Newton inserted a long needle "between my eye and the bone, as near to the backside of my eye as I could." Why take such a risk? Lucas Hnath reimagines the contentious, plague-ravaged world Newton inhabited in *ISAAC'S EYE*, exploring the dreams and

longings that drove the rural farm boy to become one of the greatest thinkers in modern science.

Australian Landscapes provides an up-to-date statement on the geomorphology of Australia. Karst, desert, bedrock rivers, coasts, submarine geomorphology, biogeomorphology and tectonics are all covered, aided by the latest geochronological techniques and remote

sensing approaches. The antiquity and enduring geomorphological stability of the Australian continent are emphasized in several chapters, but the cutting-edge techniques used to establish that stability also reveal much complexity, including areas of considerable recent tectonic activity and a wide range of rates of landscape change. Links to the biological sphere are explored, in relation both to the lengthy human presence on the continent and to a biota that resulted from

Cenozoic aridification of the continent, dated using new techniques. New syntheses of glaciation in Tasmania, aridification in South Australia and aeolian activity all focus on Quaternary landscape evolution.

"A beautiful, absorbing, tragic book."—Larry

McMurtry In 1851, a war began in what would

become Yosemite

National Park, a war

against the indigenous inhabitants. A century

later—in 1951—and a

hundred and fifty miles away, another war began

when the U.S.

government started

setting off nuclear bombs at the Nevada Test Site. It

was called a nuclear testing program, but functioned as a war against the land and people of the Great Basin. In this foundational book of landscape theory and environmental thinking, Rebecca Solnit explores our national Eden and Armageddon and offers a pathbreaking history of the west, focusing on the relationship between culture and its implementation as politics. In a new preface, she considers the continuities and changes of these invisible wars in

the context of our current climate change crisis, and reveals how the long arm of these histories continue to inspire her writing and hope.

This fifth edition revises the classical topics of the vehicle electrical systems such as system architecture, control, components and sensors. There is now greater detail on electronics and their application in the motor vehicle, including electrical energy management (EEM) and discusses the topic of

inter system networking within the vehicle. It also includes a description of the concept of hybrid drive a topic that is particularly current due to its ability to reduce fuel consumption and therefore CO2 emissions. This book will benefit automotive engineers and design engineers, automotive technicians in training and mechanics and technicians in garages. Airport employees are vital to the operation of an airport. They staff the airport on a daily basis from well before the first flight operation until after the last flight operation, which at many airports is 24 hours a day, 365 days a year. Airport employees generate a significant number of vehicle trips to and from the airport each day, which impacts air quality, airport traffic

conditions, and traffic in the communities surrounding the airport and on the freeway system. The purpose of this report was to determine what is known about airport employee commute patterns and commute modes, what programs are being offered to airport employees by the airport operator or a transportation management association (TMA) to provide them with alternatives to the drive alone commute to work, how progress is

being monitored, what is known about the effectiveness of airport employee commute options (ECO) programs, what the challenges are for the providers of such programs, and to research some ECO programs offered by non-airport employers for program elements that may have applicability in the airport environment. This report was accomplished through a literature search of airport employee commute programs, commute programs offered by non-

airport employers that may have applicability in the airport environment, and through interviews with four U.S. and one U.K. airport operators (of 16 airports and 3 TMAs identified, 84 percent interviewed) that offer comprehensive airport ECO programs. Each of the five case studies provides an example of how ECO strategies are applied in the airport environment.

This book describes the important role played by communities in innovation processes and how organizations can benefit from it. A community brings together individuals who share a common passion for a given area of knowledge and can contribute to innovation at different levels: capitalization of good practices, problem solving, sharing of expertise, or development of new and creative ideas. The literature has progressively identified

many variants of communities such as communities of practice, epistemic communities, communities of interest, virtual communities, etc. These forms of communities differ regarding the type of the specialized activities of knowledge on which they focus. As practitioners and academics increasingly emphasized the needs of collaborative approaches in innovation, they progressively challenged the traditional idea that innovation is mainly generated by

hierarchical corporate departments and highlighted the active role that communities play in innovation processes. The aim of this book is to shed light, using multiple examples, on the proactive and fundamental role of communities in the new innovation practices of organizations.
