Continuously in print since 1952, *Modern Wiring Practice* has now been fully revised to provide an up-to-date source of reference to building services design and installation in the 21st century. This compact and practical guide addresses wiring systems design and electrical installation together in one volume, creating a comprehensive overview of the whole process for contractors and architects, as well as electricians and other installation engineers. Best practice is incorporated throughout, combining theory and practice with clear and accessible explanation, all within the framework of the Wiring Regulations. Introducing the fundamentals of design and installation with a minimum of mathematics, this book is also relevant reading for all students of electrical installation courses, such as the 2330 Certificate in Electrotechnical Technology, and NVQs from City & Guilds (including 2356, 2391 and 2382 awards), as well as trainees in industry undertaking Apprenticeships and Advanced Apprenticeships. This new edition incorporates the latest thinking on sustainability and the environment and is fully up-to-date with the 17th Edition of the IEE Wiring Regulations. Illustrations have been completely updated to show current best practice and are now in full colour. Reviews of a previous edition: 'This book has long been a favourite of mine. Its regular updating by the issue of new editions ensures it is always completely up to date with the requirements of electrical installation. It is a book that I would thoroughly recommend to any person with an involvement in our industry for it is without doubt one of the very best available, written in a clear and readily understandable manner.' For more than 30 years, students and practising electricians have relied on John Whitfield to guide them through the complexities of the Wiring Regulations. Unlike other publications, it does not assume that readers are fully conversant with electrical theory. It assumes just a basic knowledge and introduces technical matter with brief easy-to-understand explanations. His Guide is a recognised brand, has consistently been a bestseller and regarded as THE guide to the Wiring Regulations. This 4th Edition covers Amendment 3:2015, regarded as 'potentially life-saving', which comes into effect July 2015. As in earlier editions, all useful relevant details derived from other IET publications such as Guidance Notes, Wiring Matters, which might otherwise be overlooked by electricians, are included. Importantly the Guide also benefits from the most up-to-date, hands-on expertise provided by the co-author, Andrew Hay-Ellis, whose credentials are second-to-none. He is an established author of vocational electrical books and, amongst other functions, is a Chief Examiner at City & Guilds.

**An Invitation to Involvement**

The Institute of Petroleum (IP) and the Association for Petroleum and Explosives Administration (APEA) have produced this publication at the request of those involved in both installation and testing of electrical equipment at petrol filling stations. The technical content of the publication is identical to that published in several Chapters of 'Guidance for the design, construction, modification and maintenance of petrol filling stations', which replaced the technical aspects of HS(G)41 in 1999. This publication will be an invaluable tool for electrical contractors, specifiers and testing companies in their daily work. It is anticipated that the discount price of this guidance will enable a copy to be purchased by all personnel working in this field, enabling it to provide an essential on site reference.

**Legislative History**

"The issues that we will be addressing here are not only matters of engineering competency, governmental efficiency, and costs; the basic issue is literally one of life or death. The Congress has addressed these issues in the past. In 1972 the Congress enacted the Federal Dam Inspection Act. We called for a nationwide inspection of all dams. That came as a result of dam failures and our attention being called to the problem at that time. It is now 5 years later and none of those inspections have been performed. We want to know why not. There is no national program for dam safety and inspection. And, again, we want to know why not"--Page 2.
